
MA 266 Project 3

Name: Tomoki Koike

Professor: Dr. Mariano

SET-UP We will be using the pplane8 tool to figure out the prey-predator model of a aphids (x) and ladybugs (y) The model equation is

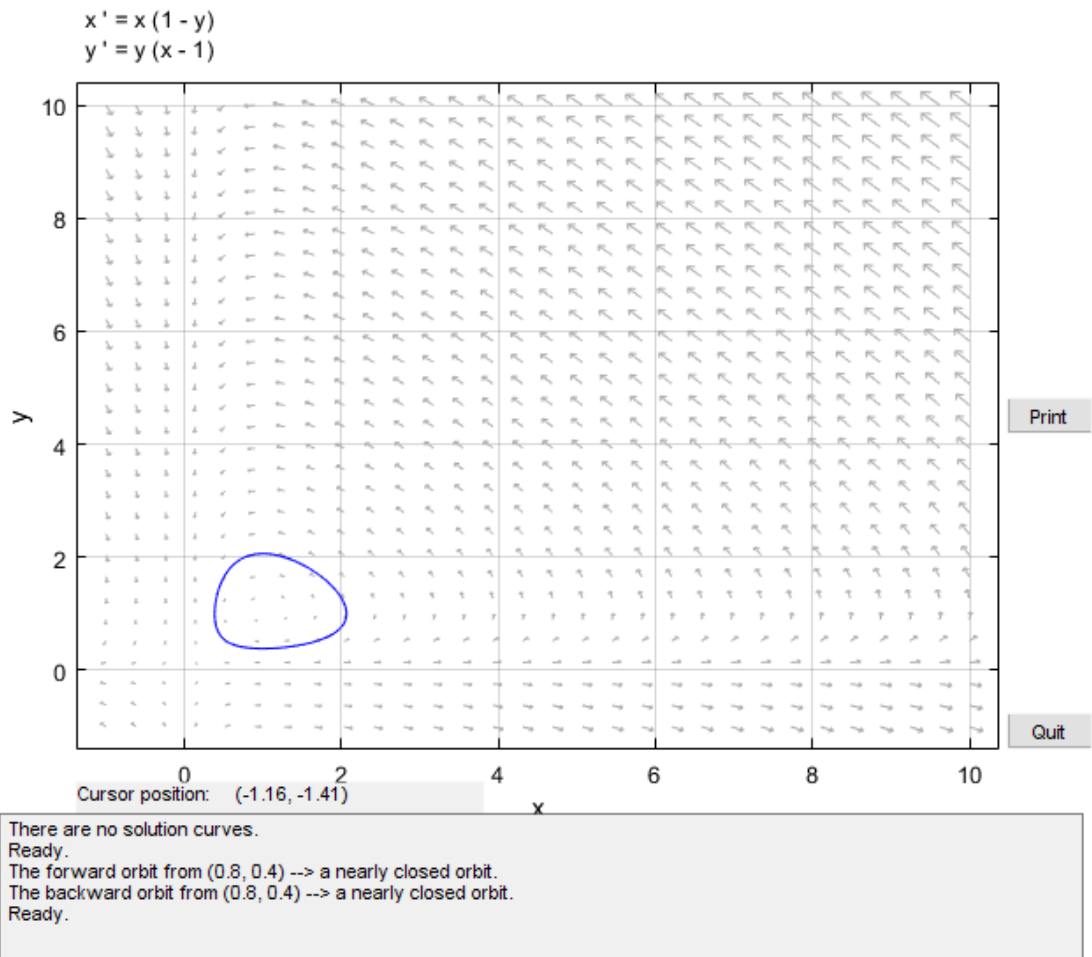

$$dx/dt = x(1 - y)$$

$$dy/dt = y(x - 1)$$

$$x(0) = 800000, y(0) = 400000$$

QUESTION 1: Use pplane8 to plot the trajectory through $(0.8, 0.4)$. As t increases, describe what happens to each population. Is the aphid population ever smaller than 300,000? Are the aphids ever eradicated? Does the ladybug population ever exceed 2 million?

```
openfig('pplane8_figure1.fig');  
openfig('pplane8_x_vs_t.fig');  
openfig('pplane8_y_vs_t.fig');
```

ANSWER: The plot of the trajectory at point $(0.8, 0.4)$ is a closed oval. As t increases, each population increases as well; however, the more the population of aphids increases, the smaller the ladybugs become, and vice versa.

The population of aphids never goes below 300,000 and they are never eradicated. There is a time when ladybugs exceed $2|M|$.

QUESTION 2: A fellow farmer suggests that she use pesticide to kill the aphids. She is reluctant because it also kills the helpful ladybugs and she prefers to have some ladybugs remaining to eat other destructive insects. If she were to use a pesticide, the growth rates would then become

$$\frac{dx}{dt} = x(1 - y) - sx(*)$$

$$\frac{dy}{dt} = y(x - 1) - sy(*)$$

where $s \geq 0$ is a measure of the “strength” of the pesticide – the larger the s , the stronger the pesticide. Currently, there are only two commercially available strengths: $s = 0.5$ and $s = 0.75$. Plot the trajectories for the new system of equations (*) with these values of s . Will the aphids ever be totally eliminated?

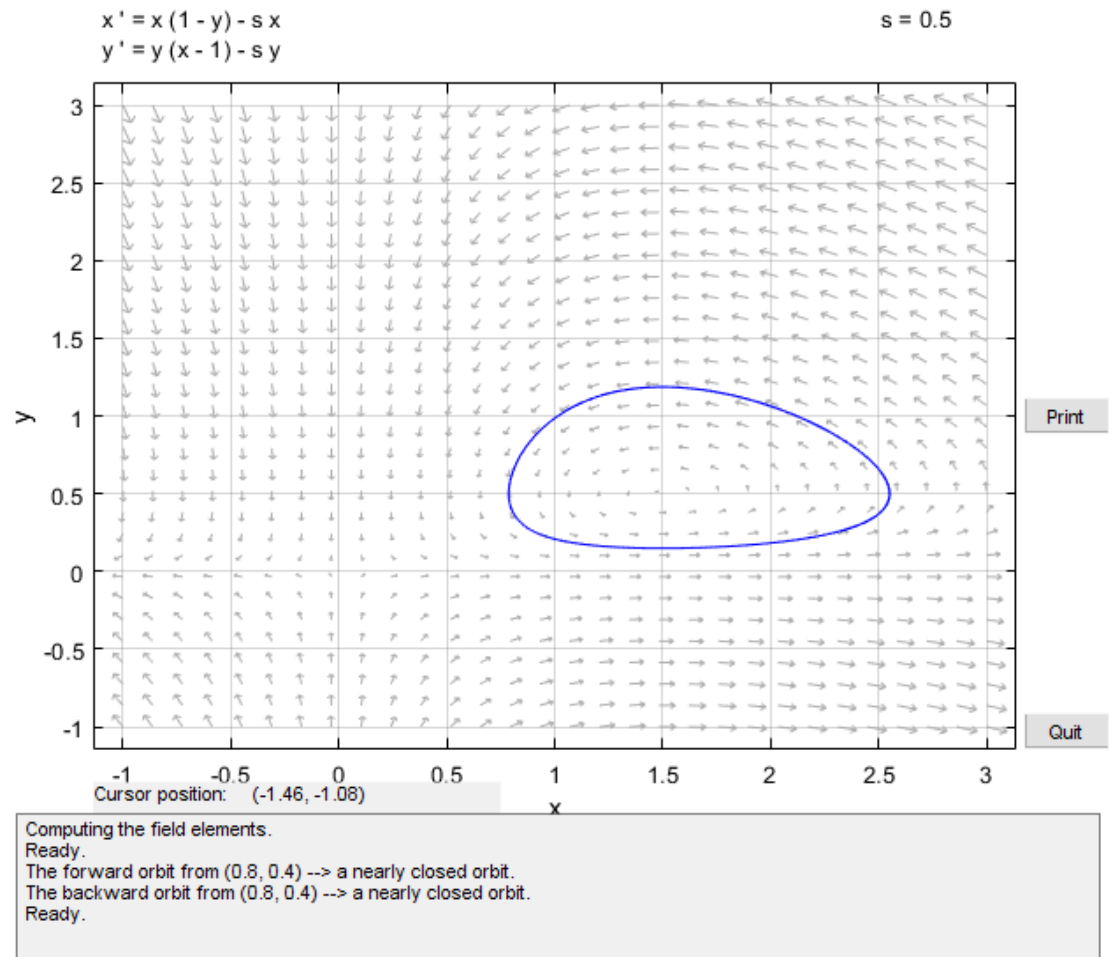

ANSWER:

- When $s = 0.5$: Aphids cannot be eradicated.
- When $s = 0.75$: Aphids cannot be eradicated.

```
openfig('pplane8_figure2.fig');
openfig('s_0.5.fig');
```

```
openfig('pplane8_figure4.fig');
openfig('s_0.75.fig');
```

QUESTION 3: If she knows her crops will survive if the aphid population never exceeds 2.6 million, which strength (if any) would you recommend she use: $s = 0.0$ (no pesticide), $s = 0.5$, $s = 0.75$?

ANSWER: Examining the figures of the population of aphids by time when using the pesticide of $s = 0.5, 0.75$, I would recommend $s = 0.5$ since the population of aphids do not surpass 2.75 by using that one.

QUESTION 4: By special permission, she could get a pesticide with the maximum strength of $s = 1.5$. Plot this trajectory. What happens to the ladybugs and aphids if she uses this pesticide?

```
openfig('pplane8_figure3.fig');
openfig('s_1.5.fig');
```

ANSWER: The population of aphids asymptote to 0 making it nearly possible to eradicate the aphids.
